## SPA HOTEL BRÜNDL

The design of the hotel, conceived by Team M architects in co-operation with Isa Stein, integrates the existing parameters of the environment. Conceived with a three-dimensional contour line, the building was not erected as a straight structure but rather folded in on itself and twisted out of its own three-dimensional axis. A hall, three floors in height, is the link between the hotel's two building structures and at the same time a multifunctional space. It opens up into the 88 rooms with different color schemes and a flair of generous relaxation, as well as the restaurant, bar, therapy zone and spa, while the design concept is continued into the swimming, wellness and sauna area.
